PL. LIII.

Euphorbia corollata

Atwin & Smith

EUPHORBIA COROLLATA.

Large flowering spurge.

PLATE LIII.

In point of stature and the showy appearance of its flowers, this species of Euphorbia differs eminently from that described in the last article. In the common features, however, of the genus, such as its lactescence, its taste, and its medicinal powers; the consanguinity of the two plants evidently appears. I am not aware that this species has been much known for its operative qualities, until within a very recent period. The Indians were, indeed, acquainted with the medicinal properties of more than one species of Euphorbia. They doubtless made use of the E. ipecacuanha, and not impossibly of the present species also. In Mr. Clayton's letter to Dr. Grew, contained in the Transactions of the Royal society for 1720, and which we have noticed
